Biomedical Engineering, Trends in Electronics Anthony Laskovski 2011-01-08 Rapid technological developments in the last century have brought the field of biomedical engineering into a totally new realm. Breakthroughs in material science, imaging, electronics and more recently the information age have improved our understanding of the human body. As a result, the field of biomedical engineering is thriving with new innovations that aim to improve the quality and cost of medical care. This book is the first in a series of three that will present recent trends in biomedical engineering, with a particular focus on electronic and communication applications. More specifically: wireless monitoring, sensors, medical imaging and the management of medical information.

Swedish Mentality Åke Daun 1996-01-05 Is there a distinctly Swedish national character? Are Swedes truly shy, unemotional, conflict-avoiding, melancholy, and dour? Swedish Mentality, the English translation of the hugely successful book published in Sweden in 1989, considers the reality behind the myth. The author, Åke Daun, is a respected ethnologist who is sometimes referred to as the "guru" of Swedish character. In recent years, it has become popular to discuss Swedishness and Swedish identity. The advent of the European Union and the increasing presence of immigrant refugees in Sweden have fueled public debate on the distinctiveness of Swedish culture. Daun, however, goes beyond stereotype, drawing upon statistics gathered over more than a decade of research. The result is an entertaining and engagingly written book. Throughout, Daun quotes from interviews with native Swedes and immigrants as well as from travel accounts, folklore, and proverbs. We learn why some Swedes might prefer to walk up a flight of stairs rather than share an elevator with a neighbor and why some gain satisfaction from walking alone in the woods or going fishing. Daun describes a range of factors influencing Swedish character, including population composition, rural background, and even climate. He recognizes behavioral variations related to gender, age, class, and region, and he considers subtleties of individual character as well. Swedish Mentality should interest a wide array of readers, whether of Swedish descent or not.

Digital Storytelling in Higher Education Grete Jamissen 2017-06-10 This book broadens the scope and impact of digital storytelling in higher education. It outlines how to teach, research and build communities in tertiary institutions through the particular form of audio-visual communication known as digital storytelling by developing relationships across professions, workplaces and civil society. The book is framed within the context of 'The Four Scholarships' developed by the Carnegie Foundation for the advancement and redefining of teaching, including the scholarships of discovery, integration, application, and teaching and learning. Across four sections, this volume considers the potential of digital storytelling to improve, enhance and expand teaching, learning, research, and interactions with society. Written by an international range of academics, researchers and practitioners, from disciplines spanning medicine, anthropology, education, social work, film and media studies, rhetoric and the humanities, the book demonstrates the variety of ways in which digital storytelling offers solutions to key challenges within higher education for students, academics and citizens. It will be compelling reading for students and researchers working in education and sociology.

Microsociology Thomas J. Scheff 1990 Moving beyond the traditional boundaries of sociological investigation, Thomas J. Scheff brings together the study of communication and the social psychology of emotions to explore the microworld of thoughts, feelings, and moods. Drawing on strikingly diverse and rich sources—the findings of artificial intelligence and cognitive science, and examples from literary dialogues and psychiatric interviews—Scheff provides an inventive account of the nature of social life and a theory of motivation that brilliantly accounts for the immense complexity involved in understanding even the most routine conversation. "A major contribution to some central debates in social theory at the present time. . . . What Thomas Scheff seeks to develop is essentially a quite novel account of the nature of social life, its relation to language and human reflexivity, in which he insists upon the importance of a theory of

emotion. . . . A work of true originality and jolting impact. . . . Microsociology is of exceptional interest, which bears witness to the very creativity which it puts at the center of human social contact." —Anthony Giddens, from the Foreword "Scheff provides a rich theory that can easily generate further exploration. And he drives home the message that sociological work on interaction, social bonds, and society cannot ignore human emotionality."—Candace Clark, American Journal of Sociology "This outstanding and ground-breaking little volume contains a wealth of original ideas that bring together many insights concerning the relationship of emotion to motivation in a wide variety of social settings. It is strongly recommended to all serious students of emotion, of society, and of human nature."—Melvin R. Lansky, American Journal of Psychiatry

Teaching with Cases Espen Anderson 2014 Case method teaching immerses students in realistic business situations?which include incomplete information, time constraints, and conflicting goals. The class discussion inherent in case teaching is well known for stimulating the development of students' critical thinking skills, yet instructors often need guidance on managing that class discussion to maximize learning. Teaching with Cases focuses on practical advice for instructors that can be easily implemented. It covers how to plan a course, how to teach it, and how to evaluate it. The book is organized by the three elements required for a great case-based course: 1) advance planning by the instructor, including implementation of a student contract; 2) how to make leading a vibrant case discussion easier and more systematic; and 3) planning for student evaluation after the course is complete. Teaching with Cases is ideal for anyone interested in case teaching, whether basing an entire course on cases, using cases as a supplement, or simply using discussion facilitation techniques. Identifying the English Edward Higgs 2011-10-06 Personal identification is very much a live political issue in Britain and this book looks at why this is the case, and why, paradoxically, the theft of identity has become ever more common as the means of identification have multiplied. Identifying the English looks not only at how criminals have been identified - branding, fingerprinting, DNA - but also at the identification of the individual with seals and signatures, of the citizen by means of passports and ID cards, and of the corpse. Beginning his history in the medieval period, Edward Higgs reveals how it was not the Industrial Revolution that brought the most radical changes in identification techniques, as many have assumed, but rather the changing nature of the State and commerce, and their relationship with citizens and customers. In the twentieth century the very different historical techniques have converged on the holding of information on databases, and increasingly on biometrics, and the multiplication of these external databases outside the control of individuals has continued to undermine personal identity security.

Telemedicine in the ICU Matthew A. Koenig 2019-04-25 This text provides a concise, yet comprehensive overview of telemedicine in the ICU. The first part of the book reviews common issues faced by practitioners and hospital administrators in implementing and managing tele-ICU programs, including the merits of different staffing models, the challenges of building homegrown programs versus contracting for services, and the impact of state laws and payer policies on reimbursement for tele-ICU services. The second part of the book presents the current state of evidence for and against ICU telemedicine, based on clinical trials, before-and-after implementation studies, and observational data. The third part dives deeper into specific use cases for telemedicine in the ICU, including telestroke, pediatric and cardiac intensive care, and early treatment of declining patients with sepsis. Written by experts in the field, Telemedicine in the ICU is a practical guide for intensive care physicians and hospital administrators that provides all the information necessary in building and maintaining a successful tele-ICU program.

Information Technology for Managers George Reynolds 2015-06-26 Now today's managers can prepare to successfully oversee and understand information systems with Reynold's INFORMATION TECHNOLOGY FOR MANAGERS, 2E. This practical, insightful book prepares current and future managers to understand the critical business implications of information technology. A wealth of actual contemporary examples demonstrate how successful managers can apply information technology to improve their organizations. The Routledge International Handbook of Children, Adolescents and Media Dafna Lemish 2013-07-18 The roles that media play in the lives of children and adolescents, as well as their potential implications for their cognitive, emotional, social and behavioral development, have attracted growing research attention in a variety of disciplines. The Routledge International Handbook of Children, Adolescents and Media analyses a broad range of complementary areas of study, including children as media consumers, children as active participants in media making, and representations of children in the media. The handbook presents a collection that spans a variety of disciplines including developmental psychology, media studies, public health, education, feminist studies and the sociology of childhood. Essays provide a unique intellectual mapping of current knowledge, exploring the relationship of children and media in local, national, and global contexts. Divided into five parts, each with an introduction explaining the themes and topics covered, the handbook features 57 new contributions from 71 leading academics from 38 countries. Chapters consider vital questions by analyzing texts, audience, and institutions, including: the role of policy and parenting in regulating media for children the relationships between children's' on-line and off-line social networks children's strategies of resistance to persuasive messages in advertising media and the construction of gender and ethnic identities The Handbook's interdisciplinary approach and comprehensive, international scope make it an authoritative, state of the art guide to the nascent field of Children's Media Studies. It will be indispensable for media scholars and professionals, policy makers, educators, and parents.

Information is Beautiful David McCandless 2009 A visual guide to the way the world really works Every day, every hour, every minute we are bombarded by information - from television, from newspapers, from the internet, we're steeped in it, maybe even lost in it. We need a new way to relate to it, to discover the beauty and the fun of information for information's sake. No dry facts, theories or statistics. Instead, Information is Beautiful contains visually stunning displays of information that blend the facts with their connections, their context and their relationships - making information meaningful, entertaining and beautiful. This is information like you have never seen it before - keeping text to a minimum and using unique visuals that offer a blueprint of modern life - a map of beautiful colour illustrations that are tactile to hold and easy to flick through but intriguing and engaging enough to study for hours.

MEDINFO 2015: EHealth-enabled Health I.N. Sarkar 2015-08-12 Health and Biomedical Informatics is a rapidly evolving multidisciplinary field; one in which new developments may prove crucial in meeting the challenge of providing cost-effective, patient-centered healthcare worldwide. This book presents the proceedings of MEDINFO 2015, held in São Paulo, Brazil, in August 2015. The theme of this conference is 'eHealth-enabled Health', and the broad spectrum of topics covered ranges from emerging methodologies to successful implementations of innovative applications, integration and evaluation of eHealth systems and solutions. Included here are 178 full papers and 248 poster abstracts, selected after a rigorous review process from nearly 800 submissions by 2,500 authors from 59 countries. The conference brings together researchers, clinicians, technologists and managers from all over the world to share their experiences on the use of information methods, systems and technologies to promote patient-centered care, improving patient safety, enhancing care outcomes, facilitating translational research and enabling precision medicine, as well as advancing education and skills in Health and Biomedical Informatics. This comprehensive overview of Health and Biomedical Informatics will be of interest to all those involved in designing, commissioning and providing healthcare, wherever they may be.

Digital Social Work Lauri Goldkind 2018-10-31 In a rapidly advancing technological culture, social work practitioners are frequently challenged to invent new strategies to meet client needs and foster social change. Despite the Council on Social Work Education's new standards for technology in social work practice, few schools of social work teach the use of technology for practice, and many instructors struggle with the integration of this increasingly necessary dimension into education. Digital Social Work is designed to offer engaging, meaningful, and easy-to-use technology content that can be incorporated into generalist and advanced social work practice courses. The chapters in this volume offer instructors and students insight into the knowledge, skills, and values required of those who practice social work 2.0; by providing concrete examples of technology tools, they complement traditional social work curricula dealing with micro, mezzo, and macro systems. Chapters can be used singly--to augment Practice, Research, or Policy courses--or can provide a format to discuss technology in courses addressing practice with individuals, youth, and families. Virtual worlds, social media, GIS, blogs, and many other technology tools are represented in this collection.

Social cost-benefit analysis in Australia and New Zealand Leo Dobes 2016-04-28 All is not well with the evaluation of government programs and projects. Resources available to any society are limited. If governments are to increase the well-being of their citizens, they must be able to select and implement the socially most beneficial projects and policies. But many government agencies lack the expertise to carry out a cost-benefit analysis, or even to commission one. Commercial consultants, on the other hand, often have some analytical expertise, but are not immune from adopting approaches that accommodate the proclivities of their client agencies. In order to increase analytical rigour and methodological consistency, this publication urges the adoption of a 'belts and braces' set of protocols for use in project evaluation.

The Darkest Eyes Mick Brady 2020-03-17 The Darkest Eyes is an epic portal-crossing adventure with mythic resonance and strong psychological underpinnings. Will Roan is at the top of her game career-wise. She's a deep-sea submersible pilot who's brainy, daring and cool. Her personal life couldn't be more different. For as long as she can remember, she's seen little gray aliens lurking in the shadows, watching her, stalking her. Although she's a scientist who tends to be inquisitive about everything, she has steadfastly refused to examine the disturbing things she's experienced throughout her life, fearing all she'd find would be evidence of her own mental instability. Her effort to present a sane exterior to the world has meant that she could never get too close to anyone or settle down anywhere. Physically and emotionally, she's always been on the run. Lately, though, the grays have been threatening to tear down the wall Will has erected between her inner life and the real world. They've been relentless in their pursuit, infringing on the semblance of normalcy she's constructed. When a particularly frightening encounter costs Will her job, she makes her way home. She's just in time for her dying mother -- her dying, crazy mother -- to give her an object that could explain away Will's madness or draw her inextricably into its clutches. A beautifully carved crystal skull holds the answers to the mystery of Will's life, her mother says. She can use it to cross a portal to Atlantis -- her real home. Will's first instinct is to run, but her flight is interrupted when her beloved young niece disappears, the apparent victim of the aliens. Will decides to plunge into the unknown to find young Becky. Atlantis is beautiful and

unspoiled, and its people appear to be living their best lives. However, political intrigue and dissent simmer beneath the surface. Hesoa is a dying world, chaotic and reeking, populated by a race of gray aliens on the verge of extinction. Will must navigate the perils of both worlds to save the child -- and, it turns out, much more. Will is beset with self-doubt. Is she sane? Is anything she's experiencing real? Can she trust anyone? Is it possible that the fate of three worlds could depend on her?

Technology Matters David E. Nye 2007-08-24 Discusses in nontechnical language ten central questions about technology that illuminate what technology is and why it matters. Technology matters, writes David Nye, because it is inseparable from being human. We have used tools for more than 100,000 years, and their central purpose has not always been to provide necessities. People excel at using old tools to solve new problems and at inventing new tools for more elegant solutions to old tasks. Perhaps this is because we are intimate with devices and machines from an early age—as children, we play with technological toys: trucks, cars, stoves, telephones, model railroads, Playstations. Through these machines we imagine ourselves into a creative relationship with the world. As adults, we retain this technological playfulness with gadgets and appliances—Blackberries, cell phones, GPS navigation systems in our cars. We use technology to shape our world, yet we think little about the choices we are making. In Technology Matters, Nye tackles ten central questions about our relationship to technology, integrating a half-century of ideas about technology into ten cogent and concise chapters, with wide-ranging historical examples from many societies. He asks: Can we define technology? Does technology shape us, or do we shape it? Is technology inevitable or unpredictable? (Why do experts often fail to get it right?)? How do historians understand it? Are we using modern technology to create cultural uniformity, or diversity? To create abundance, or an ecological crisis? To destroy jobs or create new opportunities? Should "the market" choose our technologies? Do advanced technologies make us more secure, or escalate dangers? Does ubiquitous technology expand our mental horizons, or encapsulate us in artifice? These large questions may have no final answers yet, but we need to wrestle with them—to live them, so that we may, as Rilke puts it, "live along some distant day into the answers."

Life History and Narrative J. Amos Hatch 2002-11 Narrative inquiry refers to a subset of qualitative research design in which stories are used to describe human action. This book contains current ideas in this emerging field of research. Chapters include a qualitative analysis of narrative data; criteria for evaluating narrative inquiry, linking emotion and reason through narrative voice, audience and the politics of narrative; trust in educational storytelling; narrative strategies for case reports; life history narratives and women's gender identity; and issues in life history and narrative inquiry. This text is intended to be of interest to all qualitative researchers and education researchers studying forms of narrative.
