Transforming Our World Through Design, Diversity and Education

Gerald Craddock 2018-10-18 Good design is enabling, and each and

every one of us is a designer. Universal Design is widely recognized an important concept that should be incorporated in all person-centred policies. The United Nations

Convention on the Rights of Persons with Disabilities (UNCRPD) clearly stipulates that the most effective way of delivering on the promise of an inclusive society is through a Universal Design approach. Sitting at the intersection of the fields of Higher Education and Universal Design, this book presents papers delivered at the Universal Design and Higher Education in Transformation Congress (UDHEIT2018), held in Dublin, Ireland, from 30 October to 2 November 2018. This event brings together key experts from industry, education, and government and non-government organization sectors to share experiences and knowledge with all participants. The 86 papers included here are grouped under 17 headings, or themes, ranging from education and digital learning through healthcare to engagement with industry and urban design. Celebrating and integrating all that is good in design, diversity and education, this

book will be a valuable resource for all those interested in the inspiring and empowering developments in both Universal Design and higher education.

Durkheim and the Law Steven Lukes 2017-09-16 The law was central to Durkheim's sociological theory and to his efforts to establish sociology as a distinctive discipline. This revised and updated second edition of *Durkheim and the Law* brings together key texts which demonstrate the development of Durkheim's thinking on the sociology of law, several of them newly translated here. The editors, both world-renowned Durkheim scholars, provide a comprehensive analysis of the intellectual significance and distinctiveness of Durkheim's work on the subject. They show how his ideas evolved over time; how they contributed to the development of a distinctively

Durkheimian vision of a science of society; and they provide a comprehensive assessment of the strengths and weaknesses of his theorizing about law, as well as its continuing relevance for contemporary sociology. Enriched with a new introduction and useful learning features, this book remains a major reference for students of socio-legal theory.

Science in the Archives Lorraine Daston 2017-04-04 "Science in the Archives" reveals affinities and continuities among the sciences of the archives, across many disciplines and centuries, in order to present a better picture of essential archival practices and, thereby, the meaning of science. For in both the natural and human sciences, archives of the most diverse forms make cumulative, collective knowledge possible. Yet in contrast to laboratories, observatories, or the field, archives have yet to be studied across the

board as central sites of science. The volume covers episodes in the history of astronomy, geology, genetics, classical philology, climatology, history, medicine, and ancient natural philosophy, as well as fundamental practices such as collecting, retrieval strategies, and data mining. The time frame spans doxology in Greco-Roman antiquity to NSA surveillance techniques and the quantified-self movement. Each chapter explores the practices, politics, economics, and open-ended potential of the sciences of the archives, making this the first book devoted to the role of archives in the natural and human sciences.

Tunnel Fire Dynamics Haukur Ingason 2014-11-14 This book covers a wide range of issues in fire safety engineering in tunnels, describes the phenomena related to tunnel fire dynamics, presents state-of-the-art research, and gives detailed solutions to these major issues.

Examples for calculations are provided. The aim is to significantly improve the understanding of fire safety engineering in tunnels. Chapters on fuel and ventilation control, combustion products, gas temperatures, heat fluxes, smoke stratification, visibility, tenability, design fire curves, heat release, fire suppression and detection, CFD modeling, and scaling techniques all equip readers to create their own fire safety plans for tunnels. This book should be purchased by any engineer or public official with responsibility for tunnels. It would also be of interest to many fire protection engineers as an application of evolving technical principles of fire safety.

Improving Patient Care Richard Grol
2013-03-18 As innovations are constantly being developed within healthcare, it can be difficult both to select appropriate new practices and technologies and to

successfully adopt them within complex organizations. It is necessary to understand the consequences of introducing change, how to best implement new procedures and techniques, how to evaluate success and to improve the quality of patient care. This comprehensive guide allows you to do just that. *Improving Patient Care*, 2nd edition provides a structure for professionals and change agents to implement better practices in health care. It helps health professionals, managers, policy makers and researchers to assess new techniques and select and implement change in their organizations. This new edition includes recent evidence and further coverage on patient safety and patient centred strategies for change. Written by an international expert author team, *Improving Patient Care* is an established standard text for postgraduate students of health policy, health services and

healthmanagement. The strong author team are global professors involved in managing research and development in the field of qualityimprovement, evidence-based practice and guidelines, qualityassessment and indicators to improve patient outcomes throughreceiving appropriate healthcare.

The Estrogen Elixir Elizabeth Siegel Watkins 2007-04-16 In the first complete history of hormone replacement therapy (HRT), Elizabeth Siegel Watkins illuminates the complex and changing relationship between the medical treatment of menopause and cultural conceptions of aging. Describing the development, spread, and shifting role of HRT in America from the early twentieth century to the present, Watkins explores how the interplay between science and society shaped the dissemination and reception of HRT and how the medicalization—and subsequent efforts toward the

demedicalization—of menopause and aging affected the role of estrogen as a medical therapy. Telling the story from multiple perspectives—physicians, pharmaceutical manufacturers, government regulators, feminist health activists, and the media, as well as women as patients and consumers—she reveals the striking parallels between estrogen’s history as a medical therapy and broad shifts in the role of medicine in an aging society. Today, information about HRT is almost always accompanied by a laundry list of health risks. While physicians and pharmaceutical companies have striven to develop the safest possible treatment for the symptoms of menopause and aging, many specialists question whether HRT should be prescribed at all. Drawing from a wide range of scholarly research, archival records, and interviews, *The Estrogen Elixir* provides valuable historical context

for one of the most pressing debates in contemporary medicine.

Violence Against Women and Ethnicity

Stephanie A Condon 2020-10-09 This book draws together both: theory and practice on minority/migrant women and gendered violence. The interplay of gender, ethnicity, religion, class, generation and sexuality in shaping the lives, experiences and choices of minority/migrant women affected by violence has not always been adequately theorised within much of the existing writing on violence against women. Feminist theory, especially the insights provided by the concept of intersectionality, are central to the editors' conceptual frameworks. The book closes with a summary and look at possible future research directions. Backed by the Norwegian Research Council and with editors and contributors widely known and respected, Atlantic Salmon Ecology is an essential purchase for all those working with this species, including fisheries scientists and managers, fish biologists, ecologists, physiologists, environmental biologists and aquatic scientists, fish and wildlife department personnel and regulatory bodies. Libraries in all universities and research establishments where these subjects are studied and taught should have copies of this important publication. 'Honour' Killing and Violence Aisha K. Gill 2014-05-07 This interdisciplinary collection provides a compelling analysis of the practices and beliefs that lead to violence against women, men and children in the name of 'honour', with a range of international insights from criminology, psychology, law and history. The volume advances legal and theoretical debates through the analysis of established research and presents new evidence and insights, addressing key questions such as: What psychological processes are relevant in the motivation of honour violence? Under what historical circumstances, and through what strategies, have honourable masculinity and violence been dissociated? Can honour be reconceptualised in ways that

challenge violent practices justified in its name? By locating 'honour' killing and 'honour' based violence within and beyond debates on violence against women and girls, this collection offers recommendations to inform both theory and practice, making this an essential resource for teachers and students, health professionals, police officers, lawyers, social workers, policy-makers, and activists working against gendered forms of violence.

The Present Moment in Psychotherapy and Everyday Life (Norton Series on Interpersonal Neurobiology) Daniel N. Stern 2010-05-17 While most psychotherapies agree that therapeutic work in the 'here and now' has the greatest power to bring about change, few if any books have ever addressed the problem of what 'here and now' actually means. Beginning with the claim that we are psychologically alive only in the now, internationally acclaimed child

psychiatrist Daniel N. Stern tackles vexing yet fascinating questions such as: what is the nature of 'nowness'? How is 'now' experienced between two people? What do present moments have to do with therapeutic growth and change? Certain moments of shared immediate experience, such as a knowing glance across a dinner table, are paradigmatic of what Stern shows to be the core of human experience, the 3 to 5 seconds he identifies as 'the present moment.' By placing the present moment at the center of psychotherapy, Stern alters our ideas about how therapeutic change occurs, and about what is significant in therapy. As much a meditation on the problems of memory and experience as it is a call to appreciate every moment of experience, The Present Moment is a must-read for all who are interested in the latest thinking about human experience.

Handbook of Sepsis W. Joost Wiersinga

2018-04-13 This practically oriented book provides an up-to-date overview of all significant aspects of the pathogenesis of sepsis and its management, including within the intensive care unit. Readers will find information on the involvement of the coagulation and endocrine systems during sepsis and on the use of biomarkers to diagnose sepsis and allow early intervention.

International clinical practice guidelines for the management of sepsis are presented, and individual chapters focus on aspects such as fluid resuscitation, vasopressor therapy, response to multiorgan failure, antimicrobial therapy, and adjunctive immunotherapy. The closing section looks forward to the coming decade, discussing novel trial designs, sepsis in low- and middle-

income countries, and emerging management approaches. The book is international in scope, with contributions from leading experts worldwide. It will be of value to residents and professionals/practitioners in the fields of infectious diseases and internal medicine, as well as to GPs and medical students.

Managing Pain in Children Alison Twycross 2009-11-16 All children have a right to appropriate prevention, assessment and control of their pain. *Managing Pain in Children* is an evidence-based, practical guide to care in all areas of children's pain management, providing nurses and other health care practitioners with the skills and expertise necessary to manage children's pain effectively. The text first explores the relevant anatomy and physiology of children, the latest policy guidelines surrounding pain management and ethical issues involved in managing

children's pain. It then goes on to look at the various pain assessment tools available for children and non-drug methods of pain relief. The text then goes on to apply these pain management principles to practice in relation to acute pain, chronic pain, palliative care and the management of procedural pain. Each of these chapters covers the evidence base, assessment techniques, pain relieving interventions, and guidance for best practice in both hospital and community settings. Special features: Practical and accessible, with 'best practice' points in each chapter. Written in the context of latest policy developments. Provides the necessary evidence-base for care throughout. With contributions from experts in the field.

Attitudes and Opinions Stuart Oskamp
2005-01-15 Notable advances resulting from new research findings, measurement approaches, widespread

uses of the Internet, and increasingly sophisticated approaches to sampling and polling, have stimulated a new generation of attitude scholars. This extensively revised edition captures this excitement, while remaining grounded in scholarly research. *Attitudes and Opinions*, 3/e maintains one of the main goals of the original edition-- breadth of coverage. The book thoroughly reviews both implicit and explicit measures of attitudes, the structure and function of attitudes, the nature of public opinion and polling, attitude formation, communication of attitudes and opinions, and the relationship between attitudes and behaviors, as well as theories and research on attitude change. Over 2,000 references support the book's scientific integrity. The authors' second goal is to demonstrate the relevance of the topic to people's lives. Subsequently, the second part

of the book examines many of the topics and research findings that are salient in the world today--political and international attitudes (including terrorism), voting behavior, racism and prejudice, sexism and gender roles, and environmental attitudes. This thoroughly revised new edition features: *an entirely new chapter on implicit measures attitudes; *a new chapter on environmental attitudes; *updated opinion poll data throughout the book; *additional material on time trends in attitudes about many issues; and *expanded, updated sections on international attitudes reflecting the events of 9/11 and the subsequent invasions of Afghanistan and Iraq. Attitudes and Opinions' broad and interdisciplinary perspective makes this an ideal text in courses on attitudes, public opinion, survey research, or persuasion, taught in a variety of departments including psychology,

communication, marketing, sociology, and political science.

Powerful Medicines Jerry Avorn, M.D. 2008-12-10 If you believe that the latest blockbuster medication is worth a premium price over your generic brand, or that doctors have access to all the information they need about a drug's safety and effectiveness each time they write a prescription, Dr. Jerry Avorn has some sobering news. Drawing on more than twenty-five years of patient care, teaching, and research at Harvard Medical School, he shares his firsthand experience of the wide gap in our knowledge of the effectiveness of one medication as compared to

another. In *Powerful Medicines*, he reminds us that every pill we take represents a delicate compromise between the promise of healing, the risk of side effects, and an increasingly daunting price. The stakes on each front grow higher every year as new drugs with impressive power, worrisome side effects, and troubling costs are introduced. This is a comprehensive behind-the-scenes look at issues that affect everyone: our shortage of data comparing the worth of similar drugs for the same condition; alarming lapses in the detection of lethal side effects; the underuse of life-saving medications; lavish marketing campaigns that influence what doctors prescribe; and the resulting upward spiral of costs that places vital drugs beyond the reach of many Americans. In this engagingly written book, Dr. Avorn asks questions that will interest every consumer: How can a product judged safe by the Food and

Drug Administration turn out to have unexpectedly lethal side effects? Why has the nation's drug bill been growing at nearly 20 percent per year? How can physicians and patients pick the best medication in its class? How do doctors actually make their prescribing decisions, and why do those decisions sometimes go wrong? Why do so many Americans suffer preventable illnesses and deaths that proper drug use could have averted? How can the nation gain control over its escalating drug budget without resorting to rationing or draconian governmental controls? Using clinical case histories taken from his own work as a practitioner, researcher, and advocate, Dr. Avorn demonstrates the impressive power of the well-conceived prescription as well as the debacles that can result when medications are misused. He describes an innovative program that employs the pharmaceutical industry's own marketing techniques to reduce

use of some of the most overprescribed and overpriced products. Powerful Medicines offers timely and practical advice on how the nation can improve its drug-approval process, and how patients can work with doctors to make sure their prescriptions are safe, effective, and as affordable as possible. This is a passionate and provocative call for action as well as a compelling work of clear-headed science.

Rape in the Nordic Countries Marie Bruvik Heinskou 2019-10-29 The Open Access version of this book, available at <http://www.taylorfrancis.com/books/e/9780429467608>, has been made available under a Creative Commons Attribution-NonCommercial-No Derivatives 4.0 license. While the Nordic countries are listed at the top in most international rankings of gender equality and citizens' feelings of security, studies on the

prevalence of sexual victimisation present a different picture, suggesting that the very countries that have invested much in establishing gender equality actually see a high prevalence of sexual violence. This book sheds light on the phenomenon and construction of rape and other forms of sexual violence within the Nordic region, exploring the ways in which rape and sexual violence are dealt with through criminal law and considering governmental policies aimed at combatting it, with a special focus on legal regulations and developments. Thematically organised, it offers new research on perpetrators, victimhood, criminal justice and prevention. Multi-disciplinary in approach, it brings together the latest work from a range of scholars to offer insights into the situation in the five Nordic countries, asking how and why rape and other forms of sexual violence

occur, whilst also addressing the timely issues of online sexual cultures, BDSM and the grey areas of sexual offences. As such, it will appeal to scholars of sociology, criminology and law with interests in gender and sexual violence.

Social cost-benefit analysis in Australia and New Zealand Leo Dobes
2016-04-28 All is not well with the evaluation of government programs and projects. Resources available to any society are limited. If governments are to increase the well-being of their citizens, they must be able to select and implement the socially most beneficial projects and policies. But many government agencies lack the expertise to carry out a cost-benefit analysis, or even to commission one. Commercial consultants, on the other hand, often have some analytical expertise, but are not immune from adopting approaches that accommodate the proclivities of their client

agencies. In order to increase analytical rigour and methodological consistency, this publication urges the adoption of a 'belts and braces' set of protocols for use in project evaluation.

Refugees--the Trauma of Exile Diana Miserez-Willday 1988

Cholera, Chloroform, and the Science of Medicine Peter Vinten-Johansen
2003-05-01 The product of six years of collaborative research, this fine biography offers new interpretations of a pioneering figure in anesthesiology, epidemiology, medical cartography, and public health. It modifies the conventional rags to riches portrait of John Snow by synthesizing fresh information about his early life from archival research and recent studies. It explores the intellectual roots of his commitments to vegetarianism, temperance, and pure drinking water, first developed when he was a medical apprentice and assistant in the north of England.

Downloaded from www.idg.no on July 5,

The authors argue that all of Snow's later contributions are traceable to the medical paradigm he imbibed as a medical student in London and put into practice early in his career as a clinician: that medicine as a science required the incorporation of recent developments in its collateral sciences--chiefly anatomy, chemistry, and physiology--in order to understand the causes of disease. Snow's theoretical breakthroughs in anesthesia were extensions of his experimental research in respiratory physiology and the properties of inhaled gases. Shortly thereafter, his understanding of gas laws led him to reject miasmatic explanations for the spread of cholera, and to develop an alternative theory in consonance with what was then known about chemistry and the physiology of digestion. Using all of Snow's writings, the authors follow him when working in his home laboratory, visiting patients throughout London,

attending medical society meetings, and conducting studies during the cholera epidemics of 1849 and 1854. The result is a book that demythologizes some overly heroic views of Snow by providing a fairer measure of his actual contributions. It will have an impact not only on the understanding of the man but also on the history of epidemiology and medical science.

Diakonia As Christian Social Practice

Stephanie Dietrich 2015-01-07 The concept of diakonia has developed over the last decades, especially within the ecumenical movement, to a degree that may be characterized as a paradigm shift. Three main features characterize this change: First, the ecclesial dimension of diakonia is now strongly underlined. While diakonia earlier often was perceived as the activity of professional diaconal workers or agencies, it is now emphasized that diakonia belongs to the nature and the mission of

being church. Second, it affirms that diaconal action must be holistic, taking into consideration the physical, mental, social and spiritual dimension, and rejecting practices that tend to departmentalize sectors of human reality. Third, it enhances bold and prophetic expressions of diaconal action, in solidarity with marginalized and suffering people, moving away from traditions of conceptualizing diakonia as humble service. The authors of this book largely subscribe to this understanding. The major part of them belongs to the faculty of Diakonhjemmet University College in Oslo. This book is a must-read for academicians, practitioners and leaders in the churches and theological institutions as it brings up new perspectives of diakonia in a changing global context. It is an ideal resource book for churches as they nurture and enhance their vision

and commitment to diakonia, including critiquing their current approaches. From the foreword by Agnes Abuom, Moderator of the World Council of Churches In the Lutheran church we speak of prophetic diakonia. Prophetic diakonia works for the fruition of peace with justice and reconciliation based on forgiveness. We work to empower those in need to stand on their feet and become deacons in their own context. I adjure readers of this book to remember that holistic mission includes prophetic diakonia. Munib Younan, President of the Lutheran World Federation, Bishop of the Evangelical Lutheran Church of Jordan and the Holy Land In a time when the churches together are searching for how to be a servant church in a rapidly changing world, this book is presenting a remarkable source for reflection and for studies. It is conveying new perspectives on the meaning and the liberating power of

the diakonia of the church. For deacons and indeed for anybody called to serve in and for the church, this book provides new insights. The ecumenical movement as a joint move into the future needs books like this. Olav Fykse Tveit, General Secretary, World Council of Churches This book is highly welcomed by Norwegian Church Aid. It puts our core mandate - international diakonia - into a broader context, while firmly placing it at the center of the nature of the Church. The authors point to the unique qualities and distinctiveness of diakonia and the book is therefore a good reminder that diakonia can truly be a powerful driver of sustainable change. Anne-Marie Helland, General Secretary, Norwegian Church Aid Diaconal circles within European churches long ago expanded the narrow and introverted ideology, courageous as it was for its time, of the early 19th century founders of the modern deacon

movements. This book evidences ongoing tensions in attempting to come to terms with the revolution that has occurred in the theological underpinning of diaconate, and is one of the first to make the attempt in the public arena. John N. Collins, Lector Emeritus, Melbourne University of Divinity Stephanie Dietrich is Associate Professor at Diakonhjemmet University College, Norway. Knud Jorgensen is Adjunct Professor at the MF Norwegian School of Theology. Kari Karsrud Korslien is Assistant Professor at Diakonhjemmet University College. Kjell Nordstokke is Professor Emeritus at Diakonhjemmet University College.

Reorientations Suzanne Pinckney Stetkevych 1994 Employing contemporary literary theory, eight members of the "Chicago school" of Arabic and Persian literature reorient the critical approach to classical Middle Eastern literature. The authors analyze a broad spectrum

of poetry, ranging from the pre-Islamic ode of the sixth century to seventeenth-century Persian Safavid Moghul verse. Among issues considered are the ritual and sacrificial aspects of literature, the transition from orality to literacy, the iconographical and mythic dimensions of philology, and imitation as a form of creation. The inclusion of contemporary translations of all the poems discussed is an important feature for students of Middle Eastern literature and comparative poetics.

Near Misses in Pediatric Anesthesia

John G. Brock-Utne 2013-05-28
Authored by "a superb clinician and award-winning teacher,"* *Near Misses in Pediatric Anesthesiology*, Second Edition is a thorough updating and significant expansion of this popular case book in the newest anesthesiology subspecialty to be approved by the American Board of Medical Specialties. The book

comprises 87 true-story clinical "near misses," including 40 cases that are brand new. Recommendations, references, and discussion accompany each case. The cases provide an ideal basis for problem-centered learning and also model how to learn from experience and to maintain professionalism during the lifelong development of clinical expertise. Dr. Brock-Utne's latest case book provides a pediatric complement to his bestselling *Case Studies of Near Misses in Clinical Anesthesia* (Springer, 2012) and *Clinical Anesthesia: Near Misses and Lessons Learned* (Springer, 2008). * Jay B. Brodsky, MD, from the Foreword.

presents a new way for therapists to
manage chronically suicidal patients,
an incredibly challenging task for
clinicians and one where an
insufficient amount of literature
exists to guide professionals. Author
Joel Paris suggests an approach that
defies conventional wisdoms about
whether suicide can be predicted or
prevented. He asserts that managing
chronically suicidal patients begins
with tolerating suicidality,
understanding the inner world of
patients, avoiding repeated
hospitalizations, and focusing on
life situations that maintain
suicidal ideas and behaviors. Each
chapter in the book develops a
theoretical perspective based on
empirical data, and many are
illustrated by clinical examples.
Topics addressed throughout the text
include: *distinctions among various

types of suicidality; *the inner
world of the chronically suicidal
patient, with a particular focus on
pain, emptiness, and hopelessness;
*the relationship between chronic
suicidality and personality
disorders, especially the category of
borderline personality; *the
effectiveness of psychotherapy and
pharmacotherapy for chronically
suicidal patients; and *the risks of
litigation in managing this patient
population. This volume is a
crucially important resource for
clinicians who treat chronically
suicidal patients, as it fills a gap
in existing literature and provides
enlightened guidelines that stem from
a large body of research in the
field.

important traits in the farmed species have rarely been utilized until recently, except for salmonid species. This means that the majority of aquaculture production (more than 90 %) is based on genetically unimproved stocks. In farm animals the situation is vastly different: practically no terrestrial farm production is based on genetically unimproved and undomesticated populations. This difference between aquaculture and livestock production is in spite of the fact that the basic elements of breeding theory are the same for fish and shellfish as for farm animals. One possible reason for the difference is the complexity of reproductive biology in aquatic species, and special consideration needs to be taken in the design of breeding plans for these species. Since 1971 AKVAFORSK, has continuously carried out large scale breeding research projects with salmonid species, and during the

latest 15 years also with a number of fresh water and marine species. Results from this work and the results from other institutions around the world have brought forward considerable knowledge, which make the development of efficient breeding programs feasible. The genetic improvement obtained in selection programs for fish and shellfish is remarkable and much higher than what has been achieved in terrestrial farm animals.

Sustainability and Resilience

Planning for Local Governments Haris Alibašić 2018-06-19 This book details a process of creating a long-term sustainability and resilience plan for local governments to use in designing and implementing sustainability and resilience-related policies, initiatives, and programs. It offers guidance and methods in applying sustainability and resilience strategies to attain the prosperity of organizations and communities. The recommendations in this book are based on the author's years of experience in directing applied resilience and sustainability planning for a local government, and years of research covering diverse

aspects of sustainability and resilience from climate change, climate preparedness and readiness, quadruple bottom line strategy, greenhouse gas emission reduction policies, climate adaptation and mitigation to sustainable energy policies and initiatives. Chapter one defines terms related to sustainability and resilience and addresses how the topics reshape local governments and communities. Chapter two maps out the sustainability and resilience process for organizations and communities, determining the appropriate steps to be taken at each level of sustainability and resilience planning. Chapter three identifies community and organizational level engagement, with internal and external stakeholders, including designs necessary throughout these processes. Chapter four contains measuring, tracking, monitoring and reporting methods using the quadruple

bottom line strategy, and developing a sustainability and resilience progress report to ensure accountability, transparency, and good governance. Then, chapter five details the implementation of a sustainability and resilience plan once it is established, describing potential programs and initiatives to achieve sustainable and resilient communities. Chapter six describes the intersection between sustainability and resilience, and chapter seven examines the tools and resources available to create a practical sustainability and resilience plan. Chapter eight concludes the text by addressing the future of sustainability and resilience, and complexities of the modern dynamics of the interconnected systems in cities, counties, and organizations, and recommends how local government administrators in their planning methods and strategies must consider these challenges.

Enquiring Minds Rene Saran 2004 This

book is the first in English to set out the theoretical underpinnings of modern Socratic Dialogue as a self-directed learning process. Central to the Socratic Method are the opportunities it gives educators and others to * learn about the Socratic Method as a new approach to their work * foster rational critical thinking skills * develop the learners' autonomy * nurture emotional intelligence and qualities such as empathy As a process of philosophising in groups, Socratic Dialogue is attracting growing interest in the US, Mexico and Europe because of its potential contribution to developing learning. It will be relevant to courses in citizenship, personal and social education, health, social work and community issues. Inspired by the philosophy of Socrates, the German philosopher Leonard Nelson began to apply the Socratic Method to thinking and learning in the 1920s. By the 1950s

Socratic Dialogue was being developed into a learning/teaching process, initially in Germany. Part 1 of the book deals with theoretical aspects of Socratic Dialogue and suggests possible applications, particularly in the school sector. Part 2 presents a range of Socratic Dialogue experiences in Britain and Germany and offers guidance about the organisation, rules and phases of the Socratic process. The foundation text by Leonard Nelson makes up Part 3. There is information about organizations involved with the promotion of Socratic Dialogue in Britain, Germany and the Netherlands and a survey of relevant literature. The work will be of interest to all those working in education, especially teachers of philosophy, ethics, religious studies and mathematics. It will provide an authoritative guide to educators who want learners to develop enquiring minds.

Perioperative Care of the Elderly

Gabriella Bettelli 2017-11-30 This innovative, comprehensive book covers the key elements of perioperative management of older patients. The book's chapter structure coincides with the clinical path patients tread during their treatment, from preoperative evaluation to post-hospital care. Epidemiological aspects and aging processes are illustrated, providing keys to understanding the quick expansion of geriatric surgery and defining the clinical profile of older surgical patients in a cybernetic perspective. Preoperative evaluation and preparation for surgery, including medication reconciliation and prehabilitation, are developed in the light of supporting decision-making about surgery in an evidence-based and patient-focused way. Intra- and postoperative management are

discussed, aiming to tailor anesthetic, surgical and nursing approaches to specific patients' needs, in order to prevent both general and age-related complications. This volume also addresses issues relevant to geriatric surgery, from different organizational models to clinical risk management and systems engineering applied to hospital organization.

Networks and Institutions in Natural Resource Management Y. Rydin 2006-01-01 Managing natural resources sustainably is a complex task that demands the involvement of many different stakeholders. Network arrangements are used to try and achieve such sustainable management. This book assesses the practice of such networks using case studies of landscape, habitat and water management from England, Sweden, Spain and Zimbabwe.
